

# QUICK PRESSURE RELIEF CONTROL VALVE

TAYFUR WATER SYSTEMS

TYPHOON®

We **Care** About  
Every Drop of  
**Water**

Tayfur Water Systems, which was established by Tayfun Yazaroğlu in 2004 in Izmir. We continue our activities as "Tayfur Water Systems Machinery Engineering Industry and Trade Inc." since 2017.

Our company offers its products and experiences to the local market and international market. Tayfur Water Systems, while strengthening its recognition abroad, continues to expand its production, sales and marketing activities every day.

Our engineers and technical staff, technological infrastructure, manufacturing, sales, project-consulting, contracting and service planning meets the requirements of the sector.

Our company manufactures "TYPHOON" brand, hydraulic control valves, plastic hydraulic control valves, backwash valves, plastic backwash valves, impact-free dynamic suction cups, plastic suction cups, bottom clamps, filter reverse flushing control devices. It is progressing towards becoming a strong brand in both domestic and foreign markets by meeting the special demands of its domestic and foreign customers.

## STORY OF US

### Our Quality Policy

In order to be a leader in quality in the sales, marketing and service sector by complying with legal conditions and to comply with the requirements of Quality Management System in order to meet the needs and expectations of our customers, to continuously improve the efficiency and to not compromise the quality under any circumstances.

### Our Mission

To be a company aiming to present its synergy in the national and international market which has always taken its responsibilities, desires and expectations of our customers in a correct, reliable and timely manner, within the framework of high quality standards, transforming efficiency and competition into an advantage...

### Our Vision

To be a leading, innovative, powerful and reputable enterprise in its sector.

# QUICK PRESSURE RELIEF CONTROL VALVE

**Agricultural**

The Quick Pressure Relief Control Valve is the safety control valve designed to protect system by releasing pressure surges to atmosphere quickly caused from sudden changes in water speed because pumps put into/ out of service frequently in water network elevation lines.

When network pressure goes beyond set point, valve opens by itself quickly and protects system by releasing over pressure. When line pressure decreases to normal level, it is closed slowly and automatically as wholly sealed without causing surge.

## Order Information

Please provide the following information in order

- Maximum flow rate ..... m<sup>3</sup>/h
- Maximum mains / operating pressure ..... bar
- Main pipeline diameter ..... mm
- Valve connection type
- Maximum valve inlet pressure ..... bar
- Desired inlet pressure value..... bar

### Assemble

- After connect the mini ball valve that is numbered "2" and the inline finger filter that is numbered "3" to the inlet of valve , the connection is provided to connect with Te fitting parts at the of the pressure sustaining pilot's outlet "I" with copper and plastic pipe.
- The outlet of metal pilot "II" is mounted with required connection parts onto the cover of valve.
- Numbered as "2/1" the mini ball valve is connected to the outlet of valve. From this point , a connection is provided to the outlet "III" of the metal pilot. At last the gauge is connected onto the other side of te fitting parts.
- Valve nominal diameter has to be same as the diameter of line or less one size than line diameter.
- Mount the valve in the direction of the arrow which is shown onto the valve.
- Usage of the isolation valves ( butterfly valves and gate valves etc) , air release valve , quick pressure relief control valves and strainers is recommended at assemble of the valve onto the pipeline.
- In the period of pressure reducing , the cavitation risk is dangerous for the body of valve. Adjust the requested outlet pressure value according to the cavitation schema and apply to our company.

1. Quick Pressure Relief Pilot
2. Mini Ball Valves
3. Finger Filter
4. Manometer
5. Pressure Adjustment Bolts

### Adjust

- Run the pump or open the main valve in the network of line and give the water to the system.
- Wait a few seconds for the water's entering to the control reservoir of the valve.
- When you turn the adjust bolt "5" in the direction of the clockwise , the adjusting of pressure value will be increased and when turn the adjust bolt in the opposite direction of the clockwise , the outlet's pressure value will be reduced.
- After adjust the desired outlet's pressure value , tighten the nut which is under of the adjust bolt.
- Check the inline finger filter that is shown as "2" according to the quality of water and please clean. If Water is not too much dirty, dont clean the filter in a few months more than one time.
- In winter season , please release the water into the pilot valves and actuators for the non-used valves..

1. Quick Pressure Relief Pilot
2. Finger Filter
3. Blind Plugs
4. Three Way Valve
5. Pressure Adjustment Bolts

## Adjust

- Run the pump or open the main valve in the network of line and give the water to the system.
- Turn the 3 way valve to the auto position "A".
- Wait a few seconds for the water's entering to the control reservoir of the valve.
- When you turn the adjust bolt "5" in the direction of the clockwise , the adjusting of pressure value will be increased and when turn the adjust bolt in the opposite direction of the clockwise , the outlet's pressure value will be reduced.
- After adjust the desired outlet's pressure value , tighten the nut which is under of the adjust bolt.
- Check the inline finger filter that is shown as "2" according to the quality of water and please clean. If Water is not too much dirty, dont clean the filter in a few months more than one time.
- In winter season , please release the water into the pilot valves and actuators for the non-used valves..

# HYDRAULIC CONTROL VALVES

**Agricultural**

Typhoon hydraulic control valves are automatic valves with direct diaphragm shut-off working with line pressure. It is a comfortable, smooth flow in the minimum pressure loss of the body and diaphragm, which is kept in the foreground in its design.

In hydraulic control valves, worn parts such as shafts, bearings and bushings are longevity. The single moving part of valves is the diaphragm.

TYPHOON hydraulic control valves, in-line drinking water pump, agricultural irrigation, fire systems, filtration, industrial, etc. designed for use in areas.

- M** Manually Controlled Valve
- PR** Pressure Reducing Control Valve
- PRPS** Pressure Reducing + Pressure Sustaining Control Valve
- PS** Pressure Sustaining Control Valve
- PREL** Pressure Reducing + Solenoid Controlled Valve
- EL** Solenoid Controlled Valve
- QR** Quick Relief Control Valve

- FL** Float Level Control Valve
- FLEL** Electric Float Level Control Valve
- DIFL** Differential Float Level Control Valve
- PC** Pump (Booster) Control Valve
- DPC** Deep Well (Submersible) Pump Control Valve
- SA** Surge Anticipating Control Valve
- HD** Hydraulic Check Valve

### Working Principles

They are automatic control valves which are used hydraulically to perform the desired operations with line pressure without the need of energy sources in the mains line.

#### Valve Closing Mode

When the pilot discharge position on the main control valve in the closed position is reached, the pressurized water on the diaphragm of the main control valve is drained. When the line pressure reaches the position of spring force, hydraulic force is applied to the diaphragm of the control valve under water, so that the valve is in full open position.

#### Valve Opening Mode

When the pilots on the main control valve reach the water pressure diaphragm, the water creates a hydraulic force. The resulting hydraulic force combines the diaphragm with the force applied by the spring to create a complete seal and close.

#### Modulation Mode

These are the pilot valves which are connected to the control valve which allows the main valve to operate in this position. According to the amount of flow and pressure to be adjusted, the water pressure on the diaphragm is controlled constantly, allowing it to operate in a modulated position.
